

MATHS

Money

This week I would like you recap what you know about money. I know that some of you are very confident identifying different coins and adding up how much money a range of coins amounts to. This is your opportunity to practise what you know.

You might want to start by watching these BBC Bitesize clips:

<https://www.bbc.co.uk/bitesize/articles/znf4kmn>

Work through the activities I have saved for each day.

DAYS 1 – 3

For days 1 – 3 you are going to practise converting money and also adding and subtracting. If you are struggling with any of the activities, there is a short animated video for each one.

The website for the videos is

<https://whiterosemaths.com/homelearning/year-3/>

You will then need to click on the pink tab at the bottom that says

SUMMER TERM WEEK 3 (w/c 4 MAY)

The lesson videos follow the lesson activities I have included in the pack this week – so lesson 1 is Day 1!

DAY 1 - Convert Pounds and Pence

DAY 2 – Add Money

DAY 3 – Subtract Money

On day 4 and 5 I would like you to challenge yourself with some money problem solving:

DAY 4

You will see there are SPICY, HOT and CHALLENGE sheets.

Choose either SPICY or HOT as a starting point. You might want to try them both.

If you are still feeling confident, try the challenge!

You will find the answers at the end.

DAY 5

Now for a real challenge! You will find lots of different ‘challenge cards’. You can work through them in any order. Some are harder than others and involve 2 steps. Have a go and see what you can do. Remember, read each carefully and write down your working. The answers are saved separately in the pack.

Finally, if you have managed to complete some maths every day, I think you have earned yourself some pocket money!
